

Theria Hotel Animations – Measured Inventory and Drive Connection

Written 2026-09-25 by Claude Code (cloud session) for Allen Grabo / RTFX Design. Companion to

HANDOFF_claude_code.md ; this document supersedes its "Inventory" and "First commands to run" sections. Everything below was measured by running code on the actual files, except where marked **untested** or **probed remotely**.

1. The answer

- **The Drive folder is connected two ways.** The claude.ai Google Drive connector can list and read it (it is owned by allen.grabo@gmail.com and shared to rtfxdesign@gmail.com). Separately, the folder is shared as *anyone with the link: writer*, so plain HTTPS downloads work from any machine with no OAuth. `tools/drive_pull.py` uses that to mirror the whole tree from `drive/manifest.json` (121 files, 2.45 GB, every file's Drive id and byte size).
- **Everything was pulled and measured.** 111 files downloaded and hashed; 95 images/videos measured (pixel dims, mode, alpha extent, fps, codec, frames). The two 681 MB stock items were probed over HTTPS without downloading. Results: `inventory/measurements_2026-09-25.json` and `.md`, `inventory/psd_layers_2026-09-25.md`.
- **Cloudflare R2 was not possible from this session.** The Cloudflare connector needs authorising in claude.ai connector settings, and there are no R2 keys in the environment. `tools/r2_upload.py` is written and compiles, but is **untested** against a real bucket. To let a future session upload, add four variables to the cloud environment (Edit environment → API credentials / environment variables): `R2_ACCOUNT_ID`, `R2_ACCESS_KEY_ID`, `R2_SECRET_ACCESS_KEY`, `R2_BUCKET`. Do not paste them into chat.
- **The storyboards HTML was rendered** (headless Chromium) and its full text is in `inventory/storyboards_rendered_text_2026-09-25.txt`. It answers some open questions and raises two new ones (§3).

2. Corrections to the handoff, from measurement

Handoff said	Measured	Consequence
Source plates are 1536×1024	The orig plates are (5th Ave tortoise 1536×1024, North Island ×3, Passalacqua villa). But the working plates are larger: <code>manor01.png/.psd</code> 2752×1536, <code>turtlewalkers.psd</code> 4346×2444, <code>miavana.psd</code> 2508×1411, <code>fadein.png</code> 6048×2592	For HD 1920×1080 nothing in upscaled/ needs enlarging. The 2752×1536 manor plate is 143 % of HD width; the pipeline doc's "re-render at 4K" is dead for these
<code>giraffe_walking.mov</code> 327 MB, "ProRes?" and open question 5 "which is the master"	ProRes 4444, 3840×2160, 30.00 fps, 300 frames, 10.0 s, yuva444p12le with a real alpha channel (alpha min 0 / max 255; the opaque region is ≈1070×1540 px, i.e. an isolated giraffe on transparency). <code>giraffe_walking.mp4</code> is the same clip as H.264 4:2:0, no alpha, on a cream field	The .mov is the master. Keep it. The mp4 is a proxy. Kling handed back 4K/30, not 1080p
"Kling native output (typically 1080p) is delivery-res"	Three different Kling outputs in the folder: 3840×2160 @ 30 (giraffe walk), 1920×1080 @ 24 (<code>frame1_to_frame2.mp4</code> , 97 frames, 4.04 s), 720×1280 @ 24 (both Miavana lemur clips, 144 frames, 6.0 s)	Kling resolution/fps depends on the mode used. The Miavana clips are portrait and below HD; usable only as comped elements at ≤ 84 % scale, and they carry backgrounds (forest, grey) that need keying
<code>manor01_giraffe0*.png</code> at 129 / 397 KB "check they're full-res, not thumbnails"	178×290 and 332×486, RGBA, cropped to bounds. Positions in the PSD: giraffe01 at (1262, 869), giraffe02 at (1578, 1049) on the 2752×1536 canvas	They are full plate resolution, not thumbnails. They are small because the giraffes are small in the plate (19 % and 32 % of frame height). Fine as background figures; not usable as a hero

Handoff said	Measured	Consequence
<code>giraffemanor_wordmark_alpha.png</code> "origin unknown"	2346×432 RGBA, opaque area 2224×245. Letterforms are a mixed-case serif "Giraffe Manor / Nairobi" with wood-grain texture inside the strokes. It is cut from <code>hf_20260909_034918_86df0845....png</code> (6048×2592, a Higgsfield render of that wordmark on cream)	It is an AI-drawn wordmark, not the client's mark. The client mark (<code>orig/Giraffe-Manor-Logo-46px.webp</code> , 288×46) is small-caps GIRAFFEMANOR with a lowercase "nairobi" and a giraffe-patch block. Different typeface, different case, different lock-up. Unusable as a brand asset. Same wordmark is baked into <code>frame02.png</code>
<code>hf_...86df0845....ai</code> 703 bytes "flag"	Opened as text: Photoshop "Pen Path Export 7.0", bounding box 0 0 6048 2592, no path data at all between setup and trailer	Empty. Delete or ignore. There is no vector logo anywhere in the folder
<code>fifthave_text.png</code> / <code>fifthavenue.png</code> "raster; same vector caveat"	603×422 and 894×894. <code>fifthavenue.png</code> is exactly 2× the 447×447 <code>orig/images.jpg</code> roundel; at 100 % the gold letterforms are soft with invented texture	AI-enlarged from a web thumbnail. Unusable for an HD title card. Vector needed
<code>fadein.png</code> "?"	6048×2592 (2.33:1), Seedream/NBP render: the manor with a giraffe eating leaves in the foreground and guests at tables . <code>fadein - resized....png</code> is the same at 3999×1714	It is the Shot 4/5 reveal plate. The storyboards page asks for "a clean manor plate without guests" — this is not that
<code>resort.png</code> "presumably outpainted/enlarged"	3600×4802 portrait , exactly 2.0× the licensed <code>Miavana_@_Dylane_Cabano_001-scaled.jpg</code> (1800×2401). Not outpainted	Still needs a 16:9 solution (outpaint or crop to 3600×2025). It is a licensed photo; outpainting it is a rights question
Miavana lemur positions "first A and last A"	<code>miavana.psd</code> has the seated lemur on the M (x 44–270) and the hanging lemur on the final A (x 2208–2364). The storyboards page also says M and final A	Handoff and timing doc say first A; PSD and storyboards say M. Pick one (§3)
Storyboards HTML "not read"	Rendered. Bundled single-page app, 16.2 MB (51 images as blobs), title "THÉRIA · AR ANIMATION PROGRAMME · HOSPITALITY SLATE / EIGHT HOTELS, EIGHT AWAKENINGS". The 3.3 MB copy in <code>Giraffe Manor/</code> has identical text, images at half size	See §3. The page's run times differ from the timing doc

Other measured facts worth knowing:

- **Byte-identical duplicates** (sha256): `Giraffe Manor/upscaled/manor01.png` = `Giraffe Manor/hf_20260909_025934_a3e0463c....png` ; the two `hf_...86df0845....png` ; the two `273559596....n.jpg` (320×320 Facebook thumbnails); the two `Versali/cfb72e66....png` .
- `Miavana/upscaled/miavana_text - crop 2026-09-25 00-56-17.png` is a **JPEG** with a .png extension (2508×1260, no alpha).
- `manor01_background.png` differs from `manor01.png` across the whole frame, not just where the giraffes were: it was re-encoded or re-rendered, not masked. Harmless, but do not expect a pixel match outside the fill.
- `turtlewalkers.png` (2896×2172, 4:3) is not a flatten of `turtlewalkers.psd` (4346×2444, 16:9). The PSD is the 16:9 version with the canvas widened and the couple/tortoise/leash separated.
- `frame1_to_frame2.mp4` : start frame matches `frame01.png` (mean diff 1.5/255); end frame matches `frame01` better than `frame02` in the wordmark band (7.9 vs 22.1). **Kling did not render the wordmark that was in the end frame.** This is the pipeline doc's §4 point demonstrated: logos must be AE layers, never in the generated frames.
- Miavana Kling clips: the mango throw is a lemur seated on a branch **in a forest** (not on sage); it produces a mango and tosses it up-right, arms follow through. The sway clip is the upside-down lemur on a **light grey** field. Neither is on alpha or sage; both need keying, and at 720 px wide both are soft.

- The 681 MB `836ec439....mov` (extracted from the zip) probed remotely: 4096×2160, 24 fps, 57 s, H.264 (yuvj420p). The zip is the same file compressed; keep one.

3. What the storyboards page says that the docs don't

Source: `inventory/storyboards_rendered_text_2026-09-25.txt` and `../inventory/previews/storyboards_page_part0-3.jpg`.

1. **Masters: 1:1 + 9:16 + 16:9.** The page header states three master aspects and "TRIGGER: PRINTED MARK / QR" (scan-to-animate AR). The handoff says HD 1920×1080 is settled. If the page is current, 16:9 HD is one of three deliverables and every layout note in the timing doc needs checking against 1:1 and 9:16 crops (the timing doc's "logo-safe area = centre 80 %" was written for exactly this). **Needs a decision.**
2. **Run times differ from the timing doc.** Storyboards → timing doc: Giraffe Manor 12.0 → 14.0 s; Fifth Avenue 11.0 → 12.0; Passalacqua 12.5 → 13.0; Versailles 14.0 → 15.0; North Island 13.0 = 13.0; Miavana 12.0 = 12.0; Necker 13.0 → 14.0; 22 Club 12.0 → 12.1. The handoff names the timing doc as source of truth for cuts. Confirm that still holds.
3. **Giraffe Manor beat 6 is "cut inside":** two heads through the breakfast window over a laid table (matches `orig images.jpg`, 547×365). The timing doc's Shot 7 lands on the exterior `images-2.jpg`. Different payoff frame.
4. **Miavana lemurs are on the M and the final A** (page and PSD agree). The mango "arcs over the letterforms... in front of the type, never behind it" and the catch is by the lemur on the M.
5. **"TO SOURCE" lists per film** (the page's own asset gaps): Giraffe Manor — vector wordmark, second giraffe cut-out in a different pose, clean manor plate without guests. Fifth Avenue — gold-on-transparent lockup, walking couple as separated layers (now done in `turtlewalkers.psd`). Passalacqua — vector crest with fish on separate paths, clean villa/lake plate. Versailles — logo files, clean salon plate without cake or chandelier. North Island — each turtle as its own layer (or 3D source), clean beach plate. Miavana — lemur cut-outs in throw/catch poses, mango, wordmark as vector. Necker — everything. 22 Club — vector mark with numerals and script on separate paths, turntable reference, licensed techno bed.
6. Necker sign-off: "confirm which mark signs off — Necker Island lockup or Virgin Limited Edition."

4. Measured inventory, per hotel

Full table with every file, hash and alpha bbox: `inventory/measurements_2026-09-25.md`. Below is the curated view. "Use" is my read; verify before relying on it.

Giraffe Manor

File	Dims	Type	Use
<code>upscaled/giraffe_walking.mov</code>	3840×2160, 30 fps, 10.0 s	ProRes 4444 with alpha	Master walk cycle, isolated giraffe entering frame right, walking left (Shot 3)
<code>upscaled/giraffe_walking.mp4</code>	3840×2160, 30 fps, 10.0 s	H.264, no alpha, cream bg	proxy of the above
<code>upscaled/frame1_to_frame2.mp4</code>	1920×1080, 24 fps, 4.04 s	H.264	Kling start/end test, hero giraffe; end frame lacks the wordmark
<code>upscaled/frame01.png / frame02.png</code>	2844×1600	RGB	Kling keyframe pair; frame02 has the AI wordmark baked in
<code>upscaled/ea5d5cfc....png</code>	1024×1536, opaque 881×1487	RGBA	original hero giraffe on alpha, portrait
<code>upscaled/manor01.psd</code>	2752×1536	3 layers	plate + two giraffe cut-outs (positions in <code>psd_layers</code>)
<code>upscaled/manor01.png / manor01_background.png</code>	2752×1536	RGB / RGBA (fully opaque)	plate with / without giraffes; guests and staff in frame

File	Dims	Type	Use
upscaled/fadein.png	6048×2592	RGB	reveal plate, giraffe head eating leaves, guests in frame
upscaled/giraffemanor_wordmark_alpha.png	2346×432	RGBA	AI-drawn wordmark; not the brand
upscaled/hf_...86df0845...ai	703 B	empty PS path export	discard
hf_20260909_030041...png	5504×3072	RGB	Higgsfield render (not inspected further)
hf_20260909_025953...png	3504×2336	RGB	Higgsfield render
hf_20260909_025923...png	2752×1536	RGB	Higgsfield render, sibling of manor01
hf_20260909_043233...png	1280×720	RGB	small render
closeup-shot-of-a-giraffe...jpeg, striking-giraffe-profile...jpg	6000×4000, 5600×3719	JPEG	licensed stock stills
orig/Giraffe-Manor-Logo-46px.webp	288×46	WEBP RGBA	the only real brand mark; web thumbnail
images.jpg, images-1.jpg, images-2.jpg	547×365, 666×460, 678×452	JPEG	web reference (interior window heads, lawn, exterior windows)

5th Avenue Hotel

File	Dims	Type	Use
upscaled/turtlewalkers.psd	4346×2444 (16:9)	5 layers: background, man, turtle, leash, woman	Master comp , layers separated, zero motion
upscaled/man.png, woman.png, turtle.png, leash.png	666×1579, 1131×1804, 1463×844, 582×336	RGBA, crop-to-bounds	layer exports; origins in psd_layers
upscaled/turtlewalkers.png	2896×2172 (4:3)	RGB	2× of the original painterly plate, pre-widening
upscaled/turtle.psd / turtle02.png	3072×2048 canvas / 2803×1298	RGBA	isolated gold tortoise, Shot 1 start frame
upscaled/fifthave.psd, fifthavenue.png, fifthave_text.png	894×894, 894×894, 603×422	RGBA	2× of a 447 px roundel; soft; not HD-usable
orig/47da2bff...png, orig/d9bdfd2c...png, orig/images.jpg	1536×1024, 1448×1086, 447×447		originals, unchanged

Miavana

File	Dims	Type	Use
upscaled/miavana.psd	2508×1411	6 layers	lock-up master : sage bg, MIAVANA, ISLAND SANCTUARY, BY TIME+TIDE, left lemur (on M), right lemur (on final A)
upscaled/miavana_000N_*.png	226×632 ... 2508×1411	RGBA	the six layer exports; wordmark letterforms are clean
upscaled/miavana copy.png	2508×1411	RGB	flatten of the PSD

File	Dims	Type	Use
upscaled/miavana_text.png	2508×2508	RGB	square render of the lock-up (source of the crop)
upscaled/...mango, throws it up and to the right.mp4	720×1280, 24 fps, 6.0 s	H.264, forest bg	the throw exists , but low-res, portrait, not on sage
upscaled/...natural motion, slow sway.mp4	720×1280, 24 fps, 6.0 s	H.264, grey bg	hanging lemur sway
upscaled/a ring-tailed lemur hanging upside-down... (2).png	3072×5504	RGB	large render of the hanging lemur
upscaled/...hanging upside-down...png , (1).png	768×1376	RGB	small renders (Kling start frames?)
upscaled/lemur.png lemur2.png lemur3.png	1796×3192 (opaque 1129×2932), 1035×2717, 1068×2689	RGBA	large lemur cut-outs; these are the ones to re-stage onto the letterforms
upscaled/Firefly_remove background 477817*.png	1535×2752, 768×1376	RGBA	Firefly cut-outs of the hanging lemur
upscaled/resort.png	3600×4802 portrait	RGB	2× of the licensed aerial; needs 16:9
upscaled/playful-ringtailed-lemurs...mov	3840×2160, 30 fps, 10 s	H.264	licensed stock
upscaled/ring-tailed-lemur-grazing...mp4	1920×1080, 25 fps, 32.8 s	H.264	licensed stock
upscaled/ringtail-lemur-looking-around...mov	3840×2160, 29.97 fps, 6.0 s	H.264	licensed stock
upscaled/ring-tailed-lemurs-perched...zip and .../836ec439...mov	4096×2160, 24 fps, 57 s (probed remotely)	H.264	licensed stock, twice (681 MB each)
root: three ring-tailed-lemur-...-utc.jpg	4500×3000, 6000×4000, 2222×3332	JPEG	licensed stock stills
195288a0...png , Miavana_©_Dylane_Cabano_001-scaled.jpg	1254×1254, 1800×2401		originals

Untouched hotels (originals only, as the handoff says)

- **Versali**: three portrait plates 1023×1537 / 1024×1536 (cake+chandelier, cake+guillotine ×2 identical, cake sliced), fd1e32ee 1024×1536 elements on black, Hall of Mirrors webp 1170×780, wordmark jpgs 554×554 and 447×447.
- **Passalaqua**: b74514e7 villa 1536×1024, 46e10c0f fish leap 1421×1107, mark jpgs 410×319 and 275×183.
- **North Island**: three plates 1536×1024 (two with the wordmark burned in), download.jpg mark 225×121.
- **Necker Island**: Virgin mark jpg 1320×1240, five docx (speeches, itinerary, questions, Animation Virgin.docx), two PDFs (schedule 6 MB, "Iconic Leadership Summit 26" 62 MB). No flamingo, no island plate.
- **22 club**: images.png 364×549 palette PNG. Nothing else.

5. Open questions – updated

Answered by measurement: - **Q5 (which giraffe file is the master)**: the .mov . It is ProRes 4444 with alpha. The mp4 is a proxy.

Still open, carried forward: 1. **Frame rate**. Timing doc assumes 24. Kling gave 30 for the giraffe and 24 for the others. Delivery fps decides whether the 4K/30 walk gets conformed with optical flow. 2. **Assembly tool**. AE or Resolve. Not stated anywhere

in the folder. 3. **Vector logos.** None exist in the folder for any of the eight hotels. Every wordmark currently on disk is a raster ≤ 554 px or an AI redraw. Has the ask gone to the clients? 4. **Which Necker concept** — flamingo brief or `Animation Virgin.docx` (the latter is a Virgin brand-history piece ending on Necker; different film).

New from this pass: 5. **Master aspects.** Storyboards page says 1:1 + 9:16 + 16:9. Handoff says HD 16:9 settled. Which? 6. **Run-time source of truth.** Storyboards page (12.0 / 11.0 / 12.5 / 14.0 / 13.0 / 12.0 / 13.0 / 12.0 s) or timing doc (14.0 / 12.0 / 13.0 / 15.0 / 13.0 / 12.0 / 14.0 / 12.1 s)? 7. **Giraffe Manor payoff.** Interior breakfast window (storyboards) or exterior upstairs windows (timing doc Shot 7)? 8. **Miavana lemur positions.** M + final A (PSD, storyboards) or first A + final A (handoff, timing doc)? 9. **resort.png** **outpaint.** It is a licensed photograph. Are the rights clear for generative extension, or should it be cropped to 3600×2025?

6. Recommended next steps

1. **Decide \$5 items 5-8 first.** They change the Giraffe Manor end plate, the Miavana composition, and whether three masters are being cut.
2. **Giraffe Manor.** The walk (Shot 3) is done and on alpha. Next generation targets are Shot 6 (the turn, over-generate) and Shot 7. Use `manor01_background.png` as the Shot 4/5 plate only if guests in frame are acceptable; otherwise generate the clean plate the storyboards ask for. Stop using the AI wordmark; comp the real mark as an AE layer once vector arrives.
3. **Fifth Avenue.** Comp is ready in `turtlewalkers.psd`. Generate Shot 5 figure motion from the separated layers at normal speed, retime in the NLE. Title card waits on vector.
4. **Miavana.** Rebuild the lock-up with the large cut-outs (`lemur.png` , `lemur2.png` , `lemur3.png`) instead of the 600 px lemurs currently in `miavana.psd`. Regenerate the throw and the sway **on sage, landscape, at the highest Kling resolution available**; the existing 720×1280 clips prove the motion but will not hold up at HD. Then Shot 3, the letters-to-palms dissolve, from two NBP end plates built from the same composition.
5. **Housekeeping (ask before doing):** delete the four duplicate files, the empty `.ai`, one of the two 681 MB stock copies; rename the mislabelled JPEG.

7. How to use what was added to the repo

Path	What
<code>drive/manifest.json</code>	every file in the Drive folder: path, id, bytes, modified time; folder ids
<code>tools/drive_pull.py DEST [--max-mb N] [--only SUBSTR] [--dry-run]</code>	mirror the folder locally over the public link; stdlib only; skips files already present at the right size. Ran here: 111 downloaded, 0 failed
<code>tools/measure.py ROOT -o out.json --md out.md</code>	dims / alpha bbox / video probe / sha256 for a tree. Needs Pillow; ffprompt for video. Ran here on the pull
<code>tools/r2_upload.py ROOT [--prefix P][--dry-run]</code>	mirror a local tree into R2 via boto3 using the four <code>R2_*</code> env vars. Untested against R2
<code>inventory/measurements_2026-09-25.{json,md}</code>	the measurements
<code>inventory/psd_layers_2026-09-25.md</code>	layer names, bboxes, sizes for all five PSDs
<code>inventory/storyboards_rendered_text_2026-09-25.txt</code>	full text of the storyboards page
<code>../inventory/previews/</code>	100 % crops of the logo rasters, frame grabs from the four generated clips, plate thumbnails, storyboards page screenshots
<code>docs/INVENTORY_2026-09-25.html</code> , <code>.pdf</code>	this document

Works on Windows, macOS and Linux; paths are relative; nothing is hardcoded. Python 3.9+.

8. What was left out, and why

- **No R2 upload happened.** No credentials in this session and the Cloudflare connector is unauthorised. Script provided, untested.
- **The 681 MB zip was not downloaded;** its extracted `.mov` sibling was probed over HTTPS instead. Everything else was downloaded in full.
- **Nothing in the Drive folder was modified, renamed or deleted.** Duplicates and the empty `.ai` are listed, not removed.
- **The five Necker docx files and the two PDFs were downloaded but only `Animation Virgin.docx` and the client brief were read.** The speeches, itinerary and the 62 MB summit PDF look unrelated to the animation.
- **No generation, no comp, no retime was done.** This is measurement and reading only.
- **The `hf_20260909_*` renders in the Giraffe Manor root were measured but not inspected visually** beyond `86df0845` (the wordmark) and `025934` (= manor01).
- **PSD layer reads are bounding boxes only.** Blend modes, layer effects and smart-object contents were not checked (none appeared to exist, but psd-tools warned about an unknown `caiM` metadata key, which is Content Credentials, not layer data).
- **Storyboards page images were not extracted individually.** They are blob URLs inside the bundle; the four page screenshots cover them.
